

Recently I'm finding that **Google's Drawing program** is way better than PicMonkey

Go to Google Drive>Select **New**> Goto **More**>select **Google Drawings**

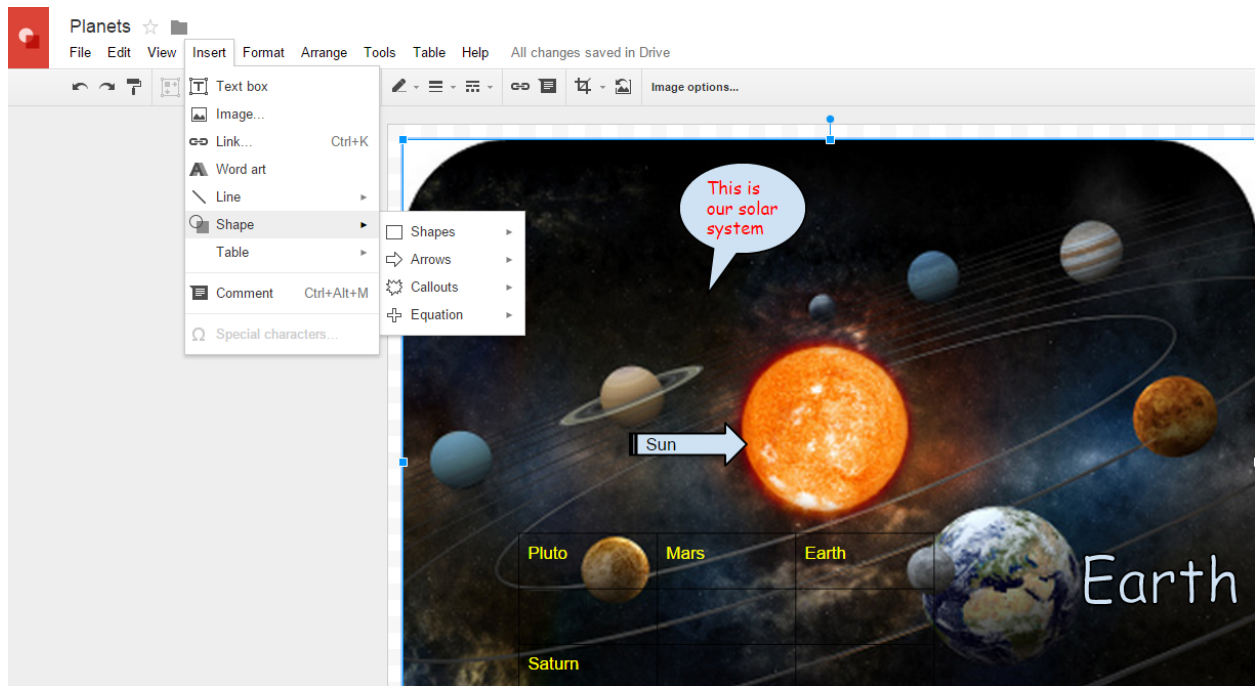

It loads with an empty main page with a very easy to use Menu.

I simply went to Google Images and copied a graphic with NO TEXT of our Solar System

In seconds from the Insert Menu I added word art a Table arrow shapes

You can Share with anybody's email address and Download As PDF, JPG
